Professional Summary

A self-motivated and proactive Information Technology student with strong problem-solving skills and a solid foundation in Java, MySQL, Object-Oriented Programming (OOP), and Data Structures Algorithms. Passionate about writing clean, efficient, and maintainable code while continuously improving programming and database skills. Eager to contribute to real-world software development projects, learn new technologies, and grow in a fast-paced technical environment

Education

VSB Engineering College (Anna University), Karur, Tamilnadu

B.Tech. in Information Technology – GPA: 8.02/10 (A/A+ Average)

2023 – 2027

Expected Graduation: 2027

Skills

Languages & DB: Java | HTML | CSS | MySQL

Frameworks & Tools: Node.js, Git, GitHub.

Other: REST API Design | Full-Stack Development | Problem-solving | Debugging

Projects

VSB-APEX: Departmental Analytics System | *React 18, FastAPI, PostgreSQL, Neon* | [GitHub](#) | [Live Demo](#)

2025

- Built and maintain an open-source analytics dashboard for the IT department tracking academic data across 200+ student records.
- Resolved a production-blocking passlib/bcrypt auth failure within 2 hours by rewriting the auth layer with direct bcrypt and SHA-256 pre-hashing.
- Managed schema evolution via Alembic migrations on Neon with CI/CD via Render and Vercel, reducing manual sync effort by ~70%.
- Coordinating multi-contributor development with protected file conventions and structured PR review workflows.

Smart Meal Notification & Calorie Overflow Management | *Node.js, Express, MySQL, JWT* | [GitHub](#)

2025

- Building a RESTful API to manage nutrition logs, weight progress, and fitness targets backed by a normalized MySQL schema.
- Engineered a “Calorie Debt” algorithm to dynamically adjust daily calorie targets based on historical overages for better adherence.
- Integrated JWT and bcryptjs for secure authentication with Nodemailer for automated meal reminders and progress notifications.
- Designed relational MySQL tables for users, meals, and progress logs ensuring data integrity and optimized query performance.

Internship

Infosys Springboard (Remote)

Aug 2025

Angular Intern

- Built a MERN stack web application for civic issue reporting with user authentication, a community voting system, and an admin dashboard for issue resolution tracking.
- Integrated map-based issue tracking using geolocation APIs to visually display and filter reported problems by location.
- Followed component-driven Angular architecture with reusable modules, improving code maintainability across the project.

Achievements

- Java [NPTEL]:** Completed “Programming in Java” – IIT Kharagpur, Jan–Apr 2025 (12 weeks), gaining strong OOP and core Java fundamentals.
- Python [NPTEL]:** Completed “Data Science for Engineers” – IIT Kharagpur, Jul–Sep 2024 (8 weeks), covering data analysis and visualization.

Extra Curricular

Event Organisation Student Club

Feb 2024

Education Team

- Organized technical workshops and hackathons for 100+ students; mentored peers in coding best practices and open-source contribution.
- Collaborated to build solutions addressing real-world challenges as part of college-level event initiatives.

College Table Tennis Club

Aug 2024

Events Team

- Led performances during cultural sports meets and coordinated team schedules for seamless event execution showcasing leadership.
